

# RACER BLUETOOTH HEADPHONES AND DONGLE

## INSTRUCTIONS

These instructions explain the usage of the Philips SHB700 Bluetooth headphones with the Bluetooth dongle used in the RACER metal detector. For more details on using the headphones with other devices, charging and other features, please refer to the headphone's original manual included in the box.

### Charging the BT Headphones (USB)

- Press and hold the play/pause  button for more than 1 second.
- If 1 short beep is heard and the LED starts flashing blue, it means that the charge is over 50%. If LED starts flashing white, it means that the charge is below 50%.
- To charge the headphones, plug the headphones into a powered USB port using the USB charging cable. LED turns white during charging and turns off when the headphones are fully charged.

### Pairing the Headphones with the Dongle

1. Make sure that the Bluetooth headphones and the device are turned off.
2. To initiate the pairing mode on the headphones, press and hold the play/pause  button for at least 4 seconds.
3. The LED will start flashing blue. Keep on pressing the button. When the LED starts flashing white and blue alternately, it means that the headphones are in pairing mode.
4. The headphones will stay in the pairing mode for about 2 minutes. If it does not pair with the dongle during this time, it will shut off automatically.
5. Make sure that the device is still off and insert the Bluetooth dongle in its slot on the side of the system box as shown in the figure. If you insert the Bluetooth module while the device is on, you need to turn the device off and on again.

6. Push forward and hold the ground balance/pinpoint trigger and press the down button once. The letters "bt" will appear on the screen and scanning for pairing will start. Scanning will be indicated in the lower right corner in the magnetic mineralization window. Scanning will last around 1 minute. To cancel, push the trigger back once and release.

7. When the pairing is completed "bt" will disappear on the RACER screen, the LED will stop flashing white and the LED will start flashing blue every 6 seconds.

8. Upon pairing, the sounds of the device will automatically be heard through the BT headphones.

### **Cancellation of Pairing and Turning off the BT Headphones**

To stop using the BT headphones, press and hold the play/pause button. The LED will flash white and the headphones will turn off. The letters "bt" will appear and the sounds will be heard from through the device.

If you remove the module while the Bluetooth is active, the sound will not be transmitted through the device. In such a case, you need to turn the device off and on again.

### **NOTE:**

- Once the BT headphones are paired with the dongle, you do not have to go through the pairing process again, as long as the dongle stays inserted in the device. All you need to do is to turn the headphones on in the pairing mode. The headphones and the dongle will be paired within 10 seconds.
- If there are many Bluetooth devices around you, the pairing may fail and you may need to try a few times.
